STRATEGIC CONSULTING METHODOLOGY	
<b>ASSESS</b>	The assessment process consists of data gathering and interviews that cover operations capabilities, as well as application and infrastructure management strategies. The objective is to identify initial business and technical requirements, dependencies and risks.
<b>ANALYZE</b>	Conduct analysis of the information and preliminary findings from the perspective of cost, risks, quality, customer requirements and business alignment. Our analysis is guided by industry trends, models, best practices and their applicability to your organization's requirements.
<b>DESIGN</b>	Formulating a scope and approach in collaboration with our customers subject matter experts. This step is focused on a high level design which captures the end to end framework accounting for the breadth of initiatives.
